CYBER SECURITY SOLUTION

State of the Art Enterprise Solutions for
IT Security Professionals in Asia

Our Website: www.logon-int.com

Your Trusted Cyber Security Partner in Asia

Since 1993, LOGON has provided security products, technical support, consulting and training services to organizations from all vertical industries in Asia.

Our cybersecurity software solutions and managed services help prevent malicious attacks and loss of sensitive information and building strong security practices.

30+ Years

Since 1993.
6 Local Offices.
Trained Certified Staffs.

1,000+ Trusts

Organizations from
varies vertical industries
in Asia

130+ Partners

Direct Global Partnership
with Award winning
Cybersecurity Vendors.

OUR SERVICES

Best Practices Consulting

Our experts rely on tested methods and help organizations in Asia find the answers they need to optimize their cybersecurity posture.

Implementation Services

We accelerate Time-To-Value by delivering high-quality implementations to meet customer priorities and processes.

Pre and Post Sales Services

Our experienced support team responds promptly to queries and delivers scheduled health checks so you gain maximum benefits from our solutions.

Training Services

Delivered by trained and experienced specialists, enable your team to learn the skills and tools needed to become productive and implement best practices.

OUR SOLUTION PORTFOLIO

- 05** Identity & Access Management
- 08** Network & Infrastructure Security
- 12** Endpoint & Device Security
- 16** IT Asset Management
- 18** Application Security
- 20** Data Security
- 22** Cloud Security
- 24** External Attack Surface Management
- 28** Security Operations & Incident Management

IAM

Identity & Access Management Solution

Secure your IT environment by
**ensuring the right people or systems can
access the right data or applications**
while keeping unauthorized users out

**Contact our Solution specialist today
for our full IAM Solution Discovery**

 **Contact Sales**

Key Trends 2025

Identity & Access Management

Enhanced Access Control for Remote Computing

Organizations should adopt MFA, zero-standing privileges, and zero-trust architecture.

User Experience is Crucial for Secure Digital Business

Strategies should unify external user experiences and apply a zero-trust approach to protect customer data for remote privileged users.

Secure Development of Applications and APIs

To ensure smooth integration of zero-trust principles throughout the application lifecycle.

Focus on Secrets, Keys, and Machine Identities

Managing identities for robotic process automation (RPA) is also essential.

Ongoing IAM Maintenance in Hybrid and Multicloud Environments

Integrate identity governance and privileged access management (PAM) for consistent identity management in a flexible multicloud IAM framework.

Evolving IGA for Decentralized Architectures

Implement a standards-based identity fabric to help manage access across diverse environments and improve policy orchestration.

What We Offer

Identity and Access Management (IAM)

- User Provisioning and Deprovisioning
- Access Control Policies
- Single Sign-On (SSO)

Privileged Access Management (PAM)

- Secure Credential Storage
- Access Control & Policies
- Just-in-Time Access
- Automated Password Rotation

Identity Verification

- Document Verification
- Real-Time Identity Checks
- Compliance with Regulations
- Fraud Detection Mechanisms

Self-Service Password Reset (SSPR)

- Password Policy Enforcement

Authentication

- User Credential Management
- Public Key Infrastructure (PKI)
- Biometric
- Adaptive Authentication

Multi-Factor Authentication (MFA)

- Push Notifications
- Time-Based One-Time Passwords (TOTP)
- Backup Authentication Methods

Network

Network & Infrastructure Security Solution

Protect your **Network, Systems, and Data** from unauthorized access, misuse, and destruction.

Ensure both hardware and software components are secure.

Contact our Solution specialist today
for our full Network & Infrastructure
Security Solution Discovery.

 **Contact Sales**

Network

Main Network Security Threats

DDoS Attacks

56% YoY rise in the total number of DDoS attacks with the largest attack peaking at a record 2 Tbps.

Man-in-the-Middle attacks

Losses from MitM attacks on small businesses average \$55,000

Malware

5.6 billion attempted malware attacks globally in 2023

Botnets

A spike in bad bot traffic (34.2%), due to decreased human activity during the holidays in December 2023.

SQL Injection Attacks

SQL Injection is the most diverse and dangerous attack, as **it is ranked #1 by OWASP**.

Phishing and Social Engineering

59% of organizations globally experienced a ransomware attack in 2024

Strengthen your Network Protection

against the increasing sophisticated and complicated threats

What We Offer

DDoS Protection & Mitigation

- Advanced Threat Mitigation
- Automated Response Mechanism & Real-Time Traffic Analysis
- Networks, Servers, & Data Centers Protection

Network Firewall (Next-Gen Firewalls)

- Built-in Intrusion Prevention Systems
- SSL Inspection

Intrusion Detection System/ Intrusion Prevention System (IPS/IDS)

- Automated Response & Real-Time Monitoring
- Deep Packet Inspection & Traffic Analysis

Email Security

- Advanced Spam Filtering
- Phishing Protection
- Email Attachment Scanning for Malware
- Email Communication Encryption

Network Management Software (NMS)

- Network Performance Monitoring
- Network Device Configuration Management

Network Access Control (NAC)

- Device Authentication
- Network Guest Access Management
- Endpoint Visibility

Network

What We Offer

Log Monitoring

- Centralized Log Collection
- Real-Time Analysis
- Compliance Reporting
- Incident Response

Malware Detection & Analysis

- Real-Time Scanning & Behavioral Analysis
- Threat Intelligence Integration to enhance detection capabilities
- Automated tools for isolating and removing malware from infected systems.

Endpoint

Endpoint & Device Security Solution

Protect Your Data and
Minimize the risk of breaches

Available **on-premise or cloud-based models**,
depending on your needs.

**Contact our Solution specialist today
for our full Endpoint & Device Security
Solution Discovery.**

Endpoint

Threat Landscape in APAC

SolarWinds Sunburst Supply Chain Attack, 2019

This sophisticated attack targeted SolarWinds software, by gaining access through **compromised software updates**, leading to widespread data breaches and significant security vulnerabilities.

Kaseya VSA Ransomware Attack, 2021

Targeting **Kaseya's remote management tool**, impacting managed service providers and their clients across Asia.

The ransomware exploited vulnerabilities to encrypt data on endpoints, affecting thousands of businesses and leading to substantial financial losses.

Microsoft Exchange Server Data Breach, 2021

Exploits targeting Microsoft Exchange servers affected numerous organizations in the APAC region, allowing attackers to access sensitive data and compromise endpoint security.

The incidents resulted in widespread breaches and highlighted **the importance of timely patch management**.

Emotet Malware Resurgence, 2022

Most Asia-Pacific, especially Japan, was the epicenter of a spike of **Emotet, a notorious banking Trojan, returning with renewed vigor**.

It utilized fileless techniques to evade detection and spread laterally within networks, compromising numerous endpoints and leading to extensive data theft.

**Protect your vulnerable touchpoints from Cyber Threats
with Our Endpoint Security Solutions**

What We Offer

Next Gen Anti-virus (NGAV)

- **Multi-layered Protection** including anti-malware, anti-ransomware, and web protection
- **Rootkit Detection** to Identifies hidden threats at the system level
- **Sandboxing**

Endpoint Detection & Response (EDR)

- **Threat Detection** to employs advanced analytics and machine learning to detect anomalies and indicators of compromise (IOCs)
- **Rapid Incident Response**
- **Forensic Capabilities** with detailed insights and logs of endpoint activities for post-incident analysis.
- **Seamless Integration with Security Ecosystems**

Mobile Device Management (MDM)

- **Policy Enforcement** such as password requirements and access controls
- **Authorized App Management and Deployment**
- **Real-Time Device Tracking** to locate lost or stolen devices and manage asset inventories effectively
- **Remote Lock and Wipe** in case of loss or theft of sensitive information

What We Offer

Remote Monitoring & Management (RMM)

- **Asset Management** of all networked devices, including hardware and software details

Patch Management

- **Automated Patch Deployment** across multiple devices
- **Continuous Vulnerability Assessment**, prioritizing patches based on risk levels.
- **Flexibility to Schedule Patch Installations** during off-peak hours
- **Rollback Capabilities** in case a patch causes issues

Employee Activity Monitoring (EAM)

- **Real-Time Monitoring** to detect potential security threats or policy violations as they occur
- **Detailed Activity Logs** to capture user actions across various platforms and applications
- **Screen Recording** to review user sessions for compliance, training, or investigation of security breaches.
- **Website and Application Usage Tracking**

Endpoint Backup

- **Scheduled Automated Backups** at regular intervals
- **Incremental Backup** to optimizes storage
- **Data Encryption** both in transit and at rest
- **Flexible Restore Options**, including full system restores, file-level recovery, and bare-metal recovery

ITAM

IT Asset Management Solution

Efficiently manage and monitor your
entire IT ecosystem,
**from hardware to software,
physical to digital assets**

**Contact our Solution specialist today
for our full ITAM Solution Discovery.**

 **Contact Sales**

What We Offer

Our Complete ITAM Portfolio

Visibility

- Automated Discovery of IT, IoT, OT
- Agentless and Agent-based scanning
- Reporting and Dashboards
- Visual Network Diagramming

Security

- Vulnerability Insights
- Patch Deployment
- Backup

Management

- Remote Control
- Software Installation
- Track Asset Uptime

Tracking

- Lifecycle Insights
- Asset Location
- Movement Tracking
- Stock Management
- Bar/QR Code Based Inventory
- Checkout & Returns

Governance

- Software License Management
- Vendor Audits & Reporting
- Straight-line Depreciation
- Effective License Position Generation

Integration

- CMDB Enrichment
- ServiceDesk Enrichment
- SIEM

Application Security

Application Security Solution

Build Security into Your SDLC

Available as **Software-as-a-Service (SaaS)-based / On-premises tools**

Contact our Solution specialist today
for our full Application Security
Solution Discovery.

Contact Sales

Application Security

What We Offer

Development

- Static Application Security Testing (SAST)

Integration

- Software Composition Analysis (SCA)
- CI/CD Pipelines
- Issue Tracking Systems

Pre Production

- Dynamic Application Security Testing (DAST)
- Mobile Application Security Testing (MAST)
- Interactive Application Security Testing (IAST)
- Penetration Testing (Web, Mobile, API)

Production

- DAST/IAST/Web and Mobile Pen Testing
- Runtime Application Self-Protection (RASP)
- Web Exposure Management

Proof-Based Scanning

Shift Left

Automate testing

Scan and analyze all third-party components—both open-source and commercial

Detect vulnerabilities in proprietary and open-source code

Secure internal systems, interfaces, and APIs

Data

Data Security Solution

Protecting sensitive information from unauthorized access, breaches, and theft

Ensure the confidentiality, integrity, and availability of data throughout its lifecycle

**Contact our Solution specialist today
for our full Data Security Solution
Discovery.**

 **Contact Sales**

What We Offer

Data Loss Prevention (DLP)

- Monitor maximum number of communication channels
 - Email, Social Forums, Instant Messengers etc.)
 - Data Transfer Protocols (FTP, HTTP POST etc.).
- Content Analysis of files and documents
- Digital Fingerprinting to mark sensitive files

File Integrity Monitoring (FIM)

- Continuously Tracks Changes to critical files and system configurations.

Digital Forensics and Incident Response (DFIR)

- Advanced Malware Detection Tools
 - Uncover hidden threats like **botnets, trojans, and anti-forensic tools.**
- Automated scanning and forensic reporting
- Comprehensive forensic reporting

Data Security Posture Management (DSPM)

- Autonomous Discovery, Classification, and Risk Monitoring
- Advanced AI-driven Analytics
- Seamless integration **across cloud and on-premise environments**

User Behaviour Analytics (UBA)

- Deeper layer of Threat Detection by analyzing how users interact with sensitive data

Cloud Security Solution

Protect data, applications, and services
hosted in cloud.

Ensure the confidentiality, integrity, and
availability of information stored online.

**Contact our Solution specialist today
for our full Data Security Solution
Discovery.**

 **Contact Sales**

What We Offer

Cloud Work Protection Platform (CWPP)

- Real-Time Monitoring and Insights into **Cloud Workloads**
- **Automated Threat Detection** with machine learning
- **Data Security and Compliance**
- **Monitor Cloud Configurations**

Cloud Security Posture Management (CSPM)

- Monitor, Assess, and Manage **IaaS, SaaS, and PaaS platforms** in on-premise, hybrid cloud, and multi-cloud environments
- Identify and Remediate Cloud Misconfigurations
- Update Scanning to regulatory compliance mandates—such as **HIPAA, PCI DSS, and GDPR**

Cloud-Native Application Protection Platform (CNAPP)

- **“Shift left”** DevOps Security
- **Real-Time Runtime Protection** against threats and anomalies that may emerge after deployment.
- **Comprehensive Visibility** into application components and dependencies across your cloud-native applications.
- **Automated Vulnerability Scanning** in code and dependencies
- **Compliance and Governance** with automating audits and reporting on security controls.
- **API Security**

EXTERNAL ATTACK

SURFACE MANAGEMENT

Solution

Secure Your External Assets in your public
internet-facing assets,
both known and unknown

**Contact our Solution specialist today
for our full EASM Discovery.**

 **Contact Sales**

What We Offer

1. Asset Discovery & Monitoring

Asset Discovery is a core function of EASM.

Our EASM Solutions help organizations to identify, inventory, and continuously monitor their internet-facing assets.

We ensure you that even unknown, unmanaged, or forgotten assets—often referred to as "shadow IT"—are identified and brought under security management.

DISCOVERY

Asset found via pivoting and keyword matching

ATTRIBUTION

Asset determined to belong to your organization

PRIORITIZATION

Level of risk asset poses to organization is determined

REMEDIATION

Action taken to secure asset so it is no longer a threat

What We Offer

2. Digital Risk Protection

Digital risk protection works as a multi-layered approach to protecting an organization from online threats.

Our reliable DRP solutions include the following 3 components:

Threat Information Engine

- Sensitive Data Exposure Monitoring
- Social Media Monitoring
- Domain Protection
- Fraud and Counterfeit Risks Monitoring

Intelligence Operations

- Proactive Infiltration and Monitoring Activities

Counterintelligence

- Third-Party Risk Monitoring
- Brand Protection
- Trademark Monitoring
- Takedown Services

What We Offer

3. Cyber Threat Intelligence

Our CTI solutions provide organizations with valuable insights into emerging threats, enabling them to proactively protect their systems and data. These approaches include:

- **General Threat Landscape Monitoring**
- **Threat Intelligence Analysis**
- **Indicator of Compromise (IOC) Development**
- **Data Theft Detection**

SOIM

Security Operations & Incident Management Solution

Continuous monitoring, detection, and response to security threats and incidents within an organization, and coordinate incident response efforts.

**Contact our Solution specialist today
for our full SOIM Solution Discovery.**

 **Contact Sales**

What We Offer

Security Information & Event Management (SIEM)

- **Centralized Log Management** from multiple sources
- **Real-Time Monitoring and Alerts** for suspicious activities
- Advanced Threat Detection to utilizes machine learning and analytics
- **Incident Response Automation**
- **Compliance Reporting** with automated reporting and audit trails

Security Orchestration Automation and Response (SOAR)

- **Security Orchestration** with seamless data sharing and collaboration across platforms.
- **Automated Workflows** such as log analysis and ticket management
- **Real-Time Threat Response** through predefined playbooks
- **Enhanced Information Sharing** with collective threat intelligence and response strategies
- **Scalability** to growing security demands

Trust LOGON as **Your Cyber Security Partner in Asia**

Contact us to discuss your requirements.
We are here to help.
